

CV LABS INCUBATION BATCH 2 OVERVIEW

Agryo, Brazil. Provides access for farmers to financial services by using an AI algorithm, which builds credit profiles and risk assessment and monitors contracts under the smart contracts transfer value layer. Agryo is developing a complete infrastructure for the agribusiness space with ratings, risk assessment, lending, insurance, price protection, savings account and trade contracts.

Asvin, Germany. Provides an update solution for Internet of Things (IoT) devices, secured by a distributed ledger. IoT vendors and operators can organize the Over-The-Air distribution of updates to IoT devices via asvin.io cloud solution. asvin.io is providing a safe and secure infrastructure for the update distribution with transparent and low costs during the lifecycle of IoT devices.

Blocksport, Switzerland. Building the bridge between (e-)sport clubs and their fans by providing the technology to reach, activate, engage and monetize the fan community. The sports industry is at the beginning of the digital transformation. Blocksport is providing a white label app solution that enables Tier 2 & 3 (e-)sport clubs to activate fans globally with a game- and loyalty-based brand ecosystem.

ditCraft, Germany. Changing the software development experience, empowering decentralized autonomous project governance and incentivizing developers. ditCraft is improving the current development cycle while also creating some further benefits for developers. ditCraft is a software development platform enabling individuals and enterprises to reach software excellence.

GatePay, USA. Developing a payments solution using blockchain technology, which is faster, cheaper, more secure and efficient than existing systems. GatePay is a suite of payment applications that powers cryptocurrency commerce for businesses of all shapes and sizes. GatePay is a software company that gives access to technologies which optimize revenue and streamline checkout processes.

Padely, Switzerland. Building a decentralized peer to peer parcel delivery platform consisting of delivery people who pick up (short distance) parcels from the sender and deliver those at the desired time and place of the recipient. With this approach, senders save time and costs, recipients have a great customer experience and it is environmentally more sustainable than services from traditional carriers.

Vault Wines, Georgia. Developing a platform for authentication of wine supply chain information, launching an e-commerce wine selling platform, and providing logistics & storage facilities (already ready) to create a direct winery-to-customer gateway, without intermediaries. Offering is completed with an ERP system for small-to-medium sized wineries that currently run many processes manually.

Wild Cards, South Africa. Building a tech stack that combines smart contracts with a new economic model (Harberger tax model) and an always-for-sale mechanism for (non fungible) digital assets. Current use case of Wildcards' tech stack is a platform that allows users to help save endangered animals by trading digital endangered animal collectables through a radical markets economic model.

Xion, USA. Empowering entrepreneurs and large corporates to create, sell, manage & scale subscription offers and giving access to an all-in-one e-commerce subscription ecosystem by the click of a button. Xion makes it easy for retailers to utilize subscription models and engage with their customers to supply products globally by using the distributed ledger technology.
